Best practice is to not change Default Domain Policy. Instead, you should create a new group policy (GPO) and link it to the domain, site or OU you need. However, if you decide to change the Domain Policy, here are the steps:

- 1) From Active Directory, access Users and Computer
- 2) In left pane, right click on the name of your domain and choose "Properties"
- 3) Click Group Policy Tab
- 4) Select Default Domain Policy and click Edit button
- 5) In left pane go to User Configuration -> Administrative Templates -> Control Panel -> Display
- 6) In right pane Enable the option "Disable changing wallpaper". It will prevent users from changing wallpaper
- 7) In left pane go to User Configuration -> Administrative Templates -> Desktop -> Active Desktop
- 8) In right pane you will be able set wallpaper name (option "Active Desktop Wallpaper") or prevent using Active Desktop wallpapers (option "Allow only bitmapped wallpapers")
